EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

2. Authorization for this examiner's amendment was given via electronic mail with Mark Friedman, Reg. No. 33,883 on March 22, 2002.

3. The application has been amended as follows:

Cancel claims 13-71.

Drawings

4. The application having been allowed, formal drawings are required in response to this Office Action.

Allowable Subject Matter

5. Claims 1-12 are allowed over the prior art of record

6. The following is an examiner's statement of reasons for allowance:

The invention is drawn to a wireless communication system using short-range communication protocol. The wireless communication system comprises at least two base stations, at least one switch in communication with the base stations and mobile units for communicating with the base stations. The short-range protocol is divided into a low-level protocol for performing task that requires accurate time synchronization and

Art Unit: 2681

a high-level protocol that does not require accurate time synchronization. For each connection of a mobile unit with a base station, an instance of the low-level protocol is ran at the base station connected with the mobile unit an instance of the high-level protocol is ran at the switch.

The prior art of record fails to teach or suggest the use of a short-range communication protocol in a wireless communication system wherein the short-range protocol is divided into a low-level protocol for performing task that requires accurate time synchronization and a high-level protocol that does not require accurate time synchronization as described in independent claim 1.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Pauli, et al., U.S. Patent No. 6,226,515 B1, discloses a cordless cellular communication system for implementing a large number of performance features such as synchronization, roaming, handover, etc.

Gaucher, U.S. Patent No. 6,175,860 B1, discloses method and apparatus for implementing a wireless/wired computer network in an indoor environment. The

Art Unit: 2681

method and apparatus employs a master network box connected to an AC power network and a master computer generates an RF field around the computer, the home and AC power network. Devices introduced into the RF field and connected to the AC power network are automatically and seamlessly registered and configured into the network without requiring any user intervention.

Sipila, U.S. Patent No. 6,163,546, discloses method and system for transmitting short messages between a short message service center, a fixed part (base station) and a portable part (mobile station). A data transfer protocol at least partly complying with the DECT system is used between the portable part and the fixed part and a data transfer protocol that is at least partly in accordance with the GSM system is used between the fixed part and the short message service center.

Mahany, U.S. Patent No. 6,078,571, discloses a local area network for supporting wireless communication among a plurality of wireless roaming devices via a first and second wireless channel.

Dent et al., U.S. Patent No. 5,896,375, discloses a short-range wireless radio communications system and method that can carry data, voice and data and voice traffic simultaneously while providing increased immunity to interference or deliberate jamming. The frequency selected for transmission or reception can be varied from time slot to time slot selectively or randomly according to a frequency hopping algorithm.
